

## Project Development Phase

### Exception Handling

Date	3 November 2023
Team Id	NM2023TMID03241
Project Name	Create a Google My Business profile

#### Exception Handling:

Exception handling is the process of handling unexpected errors that may occur when creating a Google My Business profile for soap bar and shower gel. It is important to have a robust exception handling mechanism in place to ensure that your profile is created correctly and that any errors are handled gracefully.

Here are some of the most common exceptions that may occur when creating a Google My Business profile:

- Invalid profile data: This exception occurs when the profile data that you provide is not valid. For example, the address may be incorrect or the phone number may be invalid.
- API error: This exception occurs when there is an error with the Google My Business API. For example, the API may be down or there may be a problem with your authentication credentials.
- Duplicate profile: This exception occurs when you try to create a profile for a business that already has a Google My Business profile.

These Exception can be handled by our Company.
